## PERSONAL PROJECTS

Political Bias on social media using sentimental analysis.

- This project is the analysis of political bias on social media to identify the key aspects that are involved in biasing on the social media. Extracted the data from twitter for required hashtag and plotted graphs using gephi.

Restaurant Management System

- using Swings in Java created a window to calculate the items purchased in the Restaurant.

Bill Management (Figma)

- Created a design framework for storing bills by scanning and separate the items according to their purchase and can add their billing location. So, this can help them to manage the amount.

Discounts in shopping mall (Figma)

- This application will show the discounts in the nearby malls. Use case: it reduces the time or roaming the mall to buy products or clothes.

School Database Management

- While the main objective of this project is to computerize the paperwork in the system and automate the work.

Online sales platform for farmers with full plan for a startup

- This a startup which will reduce the middle man pricing.
